1. Introduction

This document constitutes the Pillar 3 disclosure of the State Bank of India (UK) Limited (“SBIUK” or “the Bank”), a wholly owned subsidiary of State Bank of India (“SBI” or “SBI Group” or “the Parent”), a Bank established in law by the State Bank of India Act 1955. SBI is the largest bank in India and is authorised and regulated by the Reserve Bank of India.

The purpose of this document is to provide information and disclosure to the Bank’s stakeholders in relation to the internal procedures and policies adopted by the Bank in order to manage and mitigate its key risks. This document details the Pillar 3 disclosure requirements and is produced on a solo basis, in addition to the consolidated Pillar 3 disclosures made by SBI Group.

Business Model

The Bank provides the following products and services through its network of branches across the UK:

- Current, instant access savings, cash ISAs and fixed deposit accounts for individuals
- Current, business savings and fixed deposit accounts for businesses
- Residential Buy To Let (BTL) mortgages, which are also distributed via intermediary channels
- Owner occupied commercial and commercial investment mortgages
- Credit facilities to UK-based businesses in the hotel, health care, student accommodation, industry and other sectors of the economy
- USD and Euro denominated loans to businesses in other geographic regions including Europe and North America
- 24 x 7 remittance services to India
- Safety deposit lockers

The Bank also offers online banking facilities as well as banking on the mobile app. The Bank plans to expand the digital offerings in the next year and is in the process of thoroughly revamping and upgrading its mobile banking and internet banking applications to make it more user friendly by adding a number of functionalities including account opening and remittances by non-customers.

The lending is mainly funded by customer deposits comprising of current accounts, instant access accounts and term deposits. The deposit book is carefully managed to meet the growth and the maturity profile of the loan book.

The Board sets the strategy, risk appetite and culture for the business that is supported by effective risk management, regulatory compliance and governance to support and grow the business model.

Key Financial Ratios

The key financial and other performance indicators of SBIUK for the first trading year ending 31st March 2019 were as follows:

	£ Millions
Gross loans and advances to customers	1,046.3
Of which:	
Buy to let mortgages	140.2
Commercial mortgages	261.4
Corporate loans	642.6
Cash and balances with banks	19.5
Investments Securities	345.3
Deposits from customers	1,310.3
Profit before tax	9.8
Profit after tax	7.8

Net interest margin	1.6%
Cost / Income ratio	57%
Common Equity Tier 1 ratio	13.7%
Total capital adequacy ratio	17.5%
Non-Performing Assets	0%
Leverage ratio	11.3%
Number of branches	12

Overview of regulatory framework

The Basel III regulatory framework, which was implemented in Europe through the Capital Requirements Directive IV ("CRD IV"), came into effect on 1 January 2014. This package defines the level of capital that banks must hold, having regard for the individual risk profile of each bank. The requirements of CRD IV build upon the pre-existing regulations which divides the framework into three 'pillars' as described below.

Pillar 1 – these requirements set out the minimum capital requirements that each bank must adhere to.

Pillar 2 – these rules require that each bank perform an 'Individual Capital Adequacy Assessment Process' ("ICAAP") to assess its own risk profile and determine the level of additional capital required over and above the Pillar 1 requirements, having regard to those risks. The amount of any additional capital requirement is also assessed by the Prudential Regulatory Authority ("PRA") during its Supervisory Review and Evaluation Process ("SREP") and is used to determine the overall capital resources required by a bank.

Pillar 3 – these rules are designed to promote market discipline by enhancing the level of disclosure made by banks to their stakeholders, allowing them to assess a bank's key risk exposures and the adequacy of a bank's risk management process to mitigate these risks.

Measure of capital resources

The Bank applies the Standardised approach in order to calculate its credit risk capital requirements in accordance with the CRR, and any relevant derivations applied by the PRA in the UK.

Basis of disclosure

The Bank's Pillar 3 disclosure document has been prepared in accordance with the CRD IV requirements. Where disclosure has been withheld due to its proprietary nature or omitted on the basis of materiality, as the rules permit, we comment as appropriate.

All disclosures within this report have been prepared as at 31 March 2019, which is the Bank's latest financial year-end, which the Board approved on 4 July 2019.

Frequency of disclosure

Pillar 3 disclosures are made at least annually and more frequently should management determine that significant events justify such disclosures. The Bank's Pillar 3 disclosures document will be published on its website (www.sbiuk.com/Pillar3).

Verification of information

The Bank's Pillar 3 disclosures have been verified and approved through internal governance, including review by the Management Committee of SBIUK and approval by the Board Audit Committee. They are not subject to external audit.

2. Scope of Pillar 3 disclosure

This section of the document provides an outline of the structure of the Bank and the nature of its business.

This document is applicable to State Bank of India (UK) Limited, which has no subsidiaries. SBIUK is a wholly owned subsidiary of State Bank of India (SBI), a Bank established in law by the State Bank of India Act 1955. SBI is the largest bank in India and is authorised and regulated by the Reserve Bank of India.

SBIUK is authorised by the Prudential Regulation Authority (PRA) and regulated by the Financial Conduct Authority (FCA) and the PRA. The Bank obtained approval for authorisation by PRA on 22 August 2017 and commenced trading on 1 April 2018.

SBIUK's objective is to provide multi-channel retail banking services in the UK via its branch network and digital channels. The primary target customer group for the Bank are individuals and business entities in the UK. However, with a view to diversifying its loan portfolio, the Bank would look at lending and investment opportunities in other geographic regions.

The Pillar 3 disclosures have been prepared for SBIUK in accordance with the rules laid out in the CRD IV guidelines as adopted by the PRA. These disclosures should be read in conjunction with those made by SBI Group as part of their Basel III – Pillar 3 Disclosures (available in www.sbi.co.in). The disclosures provide information on the Bank's exposures, associated risk weights for different categories of assets and approach to calculating the capital requirements for Pillar 1.

3. Corporate Governance

The Board of Directors

The Board is the key governance body and is responsible for overall strategy, performance of the business and appropriate and effective risk management, in line with the approved Risk Appetite.

The Bank has established a governance structure which is appropriate for the business in terms of its level of complexity and risk profile. This structure is reviewed at least on annual basis, so that it remains suitable to support the business. The risk governance structure set out in these disclosures describes the structure that was in place for the year to 31 March 2019.

The Board consists of six members, of whom two are executive directors, two are UK-based independent non-executive directors and two are non-executive directors including the non-executive Chairman, nominated by the parent, State Bank of India.

The Directors of the Bank, who served during the period along with their total directorships (as at 31 March 2019) were as follows:

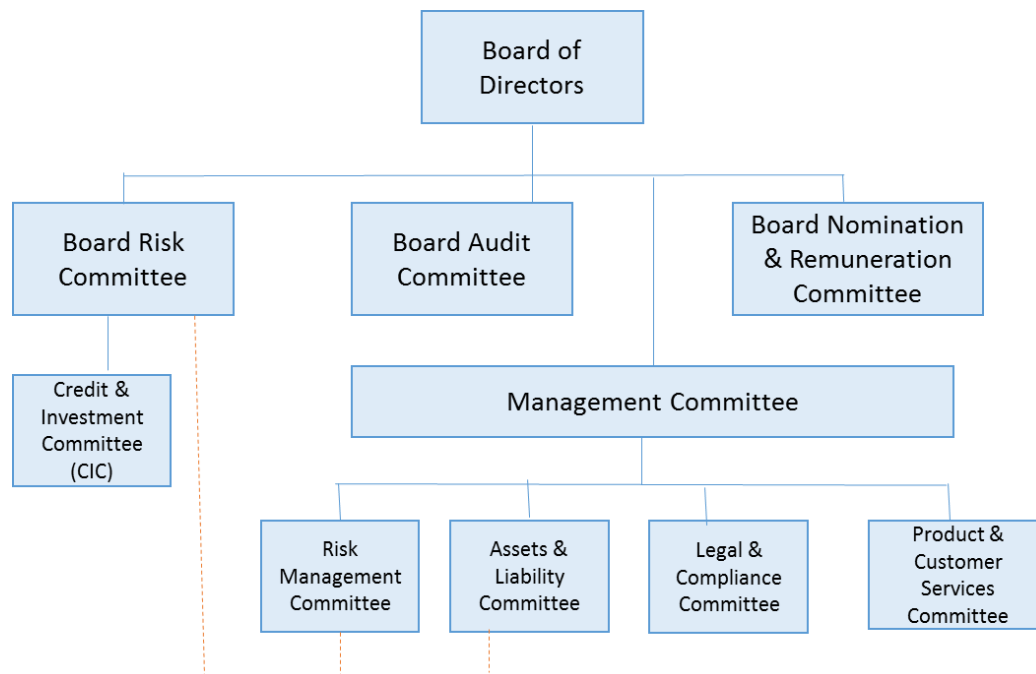

Names of Directors	Changes during the year	Position with SBIUK	Directorships Executives (incl. SBI UK)	Directorships Non-Executives (incl. SBIUK)
Chalasani, Venkat	Appointed 1 Feb 2019	Non-Executive Chairman	-	6
Baines, John		Independent Non Executive Director and Chair of Board Audit Committee	-	4
Hicks, Steven		Independent Non Executive Director and Chair of Board Risk Committee	-	2
Naik, Sanjay		Non Executive Director	-	4
Sengupta, Siddhartha	Resigned 31 Jan 2019	Non-Executive Chairman	-	6
Chadha, Sanjiv	Resigned 1 Feb 2019	CEO and Executive Director	1	2
Chandak, Sharad	Appointed 2 Feb 2019	CEO and Executive Director	1	1
Avasia, Kalpesh	Appointed 23 May 2018	Executive Director	1	-

The Board of Directors meet quarterly, or as and when required during the year. The objective of the Board is to enhance the long term success of the Bank by developing a sustainable business model. This is supported by approving and setting strategy, risk appetite and culture in line with the business model and in light of changing business opportunities, environment and risks.

The Board delegates the day to day implementation of the strategy and risk appetite within the approved policy statements to the Management Committee ('ManCo') and it is the responsibility of the Board to monitor the overall performance of the business.

Board Sub-Committees

The structure of the Sub-Committees of the Board (along with the Management Committee) is set out below.

Board Audit Committee

The Board Audit Committee is chaired by an independent non-executive director. The Committee's role is to assess and approve the internal audit charter, ensure a close relationship with external auditors, review the financial statements and monitor the risk based internal audit process.

The Committee assesses the internal and external audit findings and ensures implementation of the recommendations made. The Committee meets quarterly or as and when required during the year.

Board Risk Committee

The Committee is chaired by an independent non-executive director. The Committee's role is to assist the Board to manage the risks faced by SBIUK and to review the effectiveness of the risk management and compliance framework of the Bank. It also oversees the development of a comprehensive risk management strategy and framework and implementation of the Bank's risk appetite as set out by the Board.

In addition, the committee also oversees the effectiveness of the compliance function. The Committee meets quarterly at a minimum or as and when required during the year. The Board Risk Committee delegates decisions of transactional nature in the areas of loans and investments to the Credit and Investment Committee (CIC). In addition to making credit and investment decisions as per the policy parameters, CIC also monitors and ensures compliance with key credit and investment policies.

Board Nomination & Remuneration Committee

The Nomination & Remuneration Committee's role is to determine the policy for the remuneration of the executive directors and the senior management of the Bank, nominate candidates for appointment to the Board and ensure the Bank's remuneration system motivates staff for both long and short term performance. The Nomination & Remuneration Committee annually reviews the structure, size and composition of the Board, by evaluating the balance of skills, knowledge, experience and diversity currently in place, and makes recommendations to the Board with regard to changes, if any. In addition, the Committee ensures that during the recruitment process, the remuneration package approach for all Material Risk Takers (MRT's) aligns to SBIUK. Following internal processes and governance, the Committee is required to approve the remuneration package for new and existing MRT's.

Management Committee

The Management Committee (ManCo) is chaired by the Chief Executive Officer (CEO) and includes the executive directors of SBIUK, the Chief Financial Officer (CFO), Chief Risk Officer (CRO), Head (Legal & Compliance), Chief Operations Officer (COO) and other senior managers of the Bank. The ManCo is the primary executive committee of the Bank and as such holds responsibility for the day-to-day management of the Bank, reporting directly to the Board of Directors.

ManCo delegates its authority to a number of sub-committees detailed below:

- **Risk Management Committee**
The objective of the committee is to assist the Management Committee to review and monitor the implementation of the Risk Management Framework of the Bank. The Risk Management Committee escalates any major issues to the Board Risk Committee through the CRO.
- **Assets and Liabilities Committee**
The objective of the committee is to assist the Management Committee to review and monitor the capital, liquidity, market risk, product pricing and funding parameters of the Bank. The ALCO reports forthcoming priorities to the ManCo and escalates any major issues to the Board Risk Committee through the CFO.
- **Legal and Compliance Committee**
The objective of the committee is to assist the Management Committee to review and monitor the legal and compliance arrangements of the Bank. The Legal & Compliance Committee reports forthcoming priorities and major issues to the ManCo.
- **Product & Customer Services Committee**
The objective of the committee is to assist the Management Committee to review and monitor new product implementation as well as modification and review of the Bank's existing liability and asset products and the quality of customer service levels in the Bank.

ManCo and the sub-committees meet at least on a monthly basis, or as and when required during the year.

Diversity policy

SBIUK follows the Diversity policy of the SBI group. More information on the group's diversity policy can be obtained from the financial statements of State Bank of India which are available on www.sbi.co.in.

4. Risk Management

Risk Governance

SBIUK's Board is responsible for establishing an effective Risk Management Framework. The Board has articulated the Bank's overall risk appetite, risk management strategy and objectives. The Board's Risk and Audit sub-committees monitor the Risk Management Framework, the internal audit environment and ensure that risk exposures are within the agreed risk appetite.

Any material breaches of SBIUK's risk policies, controls and procedures are reported to the Bank's Risk Management Committee, Board Risk Committee and Board Audit Committee as appropriate.

The management of risk is applicable across all areas of SBIUK's business. The Risk Management Framework (RMF) supports the business activities within the Board approved Risk Appetite Statement. The purpose of the RMF is to provide a clear organisational structure with defined lines of responsibility under which risk is identified, managed and reported.

Risk Appetite

The Bank has established a Risk Appetite Statement which defines the type and amount of risk that the Bank is prepared to accept to achieve its strategic objectives and forms a key link between the day to day risk management of the business, its objectives, long term plan, capital plan and stress testing.

The Risk Appetite Statement is formally reviewed by the Board on at least an annual basis. The Board approves the Bank's business plans, budget, long term plan, internal capital adequacy assessment process, individual liquidity adequacy assessment process and any material new product lines in line with the approved Risk Appetite. The Board also monitors the Bank's risk profile and capital adequacy position. The Management Risk Committee monitors the Key Risk Indicators at least on monthly basis and reports the same to Board Risk Committee, to ensure risks are managed as per the approved Risk Appetite Statement.

Risk Management Framework

SBIUK operates a Three Lines of Defence Risk Management Framework, reflecting the governance arrangements.

Overview of Three Lines of Defence

The role of SBIUK's Risk Management Framework is to serve as a mechanism through which the Board is able to implement and monitor adherence to SBIUK's risk appetite.

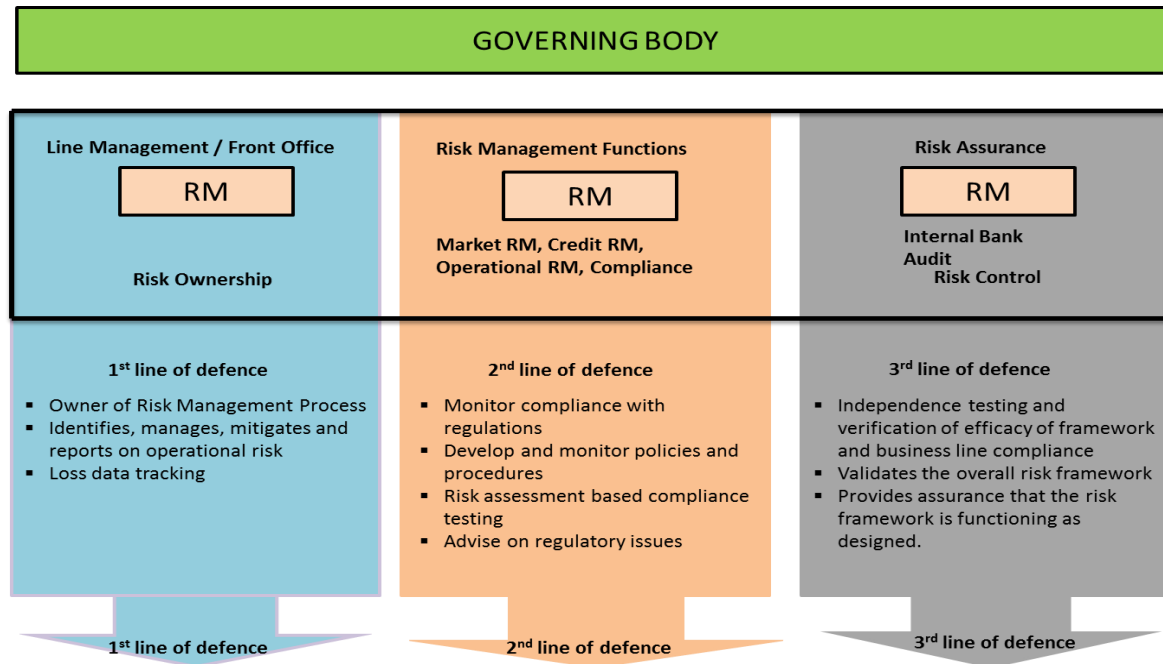

The Risk Management Framework utilises the 'Three Lines of Defence' (TLOD) model which is supported by a range of policies and procedures as well as functional charters and / or 'job descriptions' defining the roles of the individual functions as well as inter-functional responsibility boundaries.

Furthermore, to ensure it functions adequately, SBIUK ensures that it aligns other key aspects of the enterprise wide framework such as establishing ownership and a framework for managing risks within the front line businesses themselves. In particular, SBIUK's TLOD distinguishes between three stakeholder groups involved in effective risk management – those that:

- Own and manage risks

- Oversee risks
- Provide independent assurance

Three Lines of defence model

The first line of defence

The purpose of the first line of defence (“1LOD”) is to own and manage the risks of the business. Within SBIUK, the first line functions are the retail branches, credit operations, and investment operations. These operations are servicing clients both online and through the physical branch network, and from a non-client perspective via balance sheet management.

For SBIUK, managers and the owners of business processes are the first line of defence and are adequately skilled to identify and assess risks. The risk profile is reviewed, updated and modified for changes to the business environment and emerging risks.

The first line of defence interacts with the CRO, who is responsible for oversight and challenge of the first line. The CRO ensures the alignment of the Bank’s strategy with risk management activity. The business functions also seek to develop and implement policies, guidance and procedures necessary to manage risks arising. Internal procedures and standards, including the Compliance Manual, are developed with support from the second line of defence to reflect the UK’s regulatory environment and other relevant rules. SBIUK considers the following to be the 1LOD responsibilities:

- Identifying, assessing and reporting the status of known risks and emerging risks arising in a business or function;
- Where applicable, mitigating or hedging risks in accordance with SBIUK’s risk management and compliance framework;
- Ensuring policies and procedures that form the risk management and compliance framework are adequately implemented;
- Ensuring the effectiveness of risk management and risk outcomes within each business or function;
- Allocate appropriate resources to execute its front line risk management activities; and

- Monitoring risk events and losses, identifying issues and implementing remedial actions to address these issues.

The second line of defence

The second line of defence (“2LOD”), which comprises risk and compliance, are pivotal to the effective functioning of the risk framework in their role of defining the risk and compliance frameworks (e.g. setting policies and limits in line with the Board approved risk appetite) within which the first line must operate (and define their individual operational procedures).

The Risk Management Committee assess the second line of defence and regularly reviews the risk framework to ensure that it is sufficiently robust to protect SBIUK from internal as well as external risks. The framework lays out clear guidelines on critical enterprise-wide issues including market, credit, liquidity, operational and reputational risk.

Risk Management function

SBIUK’s Risk Management function is headed by the Chief Risk Officer, who reports to the Chair of the Board Risk Committee. The Risk Department in SBIUK ensures that risk parameters & guidelines are appropriate and regularly reviews the risk framework to confirm that it is robust enough to protect the entity from internal and external risks.

The responsibilities of the risk management aspect of the second line of defence include:

- Advising on best risk management framework and facilitating its implementation by the first line of defence;
- Ensuring risk management tools and controls are properly designed and implemented;
- Challenging the actions and decisions of the first line and helping the first line in considering risk when managing key decisions;
- Developing and delivering risk education and training across SBIUK; and
- Maintaining close working relationships with the third line of defence, ensuring that internal audit has access to all relevant risk-related information.

The Risk Management Committee is also responsible for reviewing and making recommendations to the Board on Risk Management strategy, the Bank’s risk appetite and core risk documents such as the ICAAP and ILAAP.

Legal and Compliance function

The Bank’s Legal and Compliance function also forms part of the second line of defence and is managed by the Head of Legal & Compliance. It receives information relevant to its monitoring of the day-to-day conduct of SBIUK’s activities. It ensures that the Bank has in place all the policies and procedures reasonably designed to achieve compliance with applicable laws and regulations. The compliance function looks at components of overall sound business practices and looks to identify and mitigate legal and compliance risks.

In delivering compliance within the Bank, SBIUK has embedded high standards. This is centred upon the Compliance Manual, Compliance Monitoring Programme, KYC / TCF policies, AML / Financial Crime policies and procedures, to make sure that the SBIUK’s business is operating well within the relevant regulatory and legal frameworks. Furthermore, Compliance works closely with Risk Management and the front line businesses in providing reviews of new clients’ on-boarding and all other aspects of conducting day to day business.

Third line of defence

The third line of defence (“3LOD”) provides independent assurance on the effectiveness of the overall system of internal control, including risk management and compliance.

Internal Audit

The Internal Audit function is headed by Head of Internal Audit, who reports to the Chair of the Audit Committee. Internal Audit is an independent and objective assurance and consulting function designed to add value and improve SBIUK’s operations. The internal audit function is co-sourced with one of the leading audit firms, PricewaterhouseCoopers. The internal auditor has devised a risk-based audit plan and conducts a risk-based approach to audit. Its role is to provide independent assurance that internal controls are in place and are adequate to mitigate risks and in doing so enhances the control culture so that governance processes are effective and efficient, and SBIUK’s goals and objectives are met. It helps accomplish SBIUK’s objectives by bringing a systematic, disciplined approach to evaluate and improve the effectiveness of risk management, control and governance processes. The Audit Committee reviews and approves Internal Audit’s plans and resources, and evaluates its effectiveness. It also reviews all internal audit reports.

A review of governance arrangements for the ICAAP and ILAAP documents and associated systems and controls is part of the Internal Audit planning cycle.

Principal risks and risk mitigations

The principal risk categories facing the Bank in achieving its strategic objectives and financial performance are assessed and a summary of these risks are set out below together with the steps taken to mitigate the risks:

Principal risk and definition	How the Bank mitigates the risk
<p>Business performance and strategic risk</p> <p>The risk arising from business decisions and improper implementation of those decisions</p>	<p>The Board and management recognise this as one of the material risks and this is mitigated by monitoring market developments, the macroeconomic environment, customer requirements and adapting the business strategy accordingly.</p> <p>A business plan has been developed by the senior management team and the assumptions contained within the plan are deemed reasonable and achievable based on their experience working and operating within the UK market. This plan has been approved by the Board.</p> <p>Stress testing is performed regularly to show the potential impact if SBIUK's business objectives are not met. The exercise involves various stress scenarios that are assessed to be severe but plausible, and confirms the Bank would still be able to retain sufficient capital and liquid resources.</p>
<p>Credit risk</p> <p>The risk that a borrower or counterparty fails to pay the interest or repay the principal on a loan on time</p> <p>In relation to treasury activities, there is a risk that the acquired securities or cash placed on deposit with other financial institutions is not repaid in full or in part</p>	<p>The Bank takes security and where appropriate, guarantees in order to support its lending and focus on sectors where the Bank has specific expertise.</p> <p>Concentration risk is managed by limits placed on counterparty exposures, geography and sector.</p> <p>The Bank has developed detailed credit policies for all types of lending and investments which are implemented in all business areas. New loans are approved by the appropriate authorities within the bank including the credit committee. The loan and investment securities portfolios are subject to periodic reviews by the relevant Senior management.</p> <p>The performance of the lending and investment portfolio is regularly monitored against the Risk Appetite.</p> <p>How the Bank manages the credit risk including counterparty credit risk is explained in Section 7: Credit risk exposures.</p>
<p>Operational risk</p> <p>The risk of loss arising from inadequate or failed processes, people and systems</p>	<p>The Bank's exposure to operational risk is evaluated and controlled through the Risk & Control Self-Assessment (RCSA) process and via a Risk Event reporting and tracking process. Escalations are made to the Risk Management Committee monthly and to the Board Risk Committee where appropriate.</p> <p>The Bank has applied the Basic Indicator Approach in accordance with the Title III Chapter 2 of the CRR in order to calculate its Pillar 1 Operational Risk capital requirement.</p>

<p>Market risk The risk that changes in market prices including interest rates and foreign exchange rates will affect the Bank's income or the value of its holdings</p>	<p>The Bank endeavours to match the currency and interest rate structure of assets with liabilities to create a natural hedge. Any residual currency risks are minimised by entering into currency swap agreements. How the Bank manages the interest rate and foreign exchange rates risk is explained in Section 8: Market risk.</p>
<p>Capital and liquidity risk <i>Capital</i> The risk that the Bank will have insufficient capital to cover unexpected losses, meet regulatory requirements or support growth plans</p> <p><i>Liquidity</i> The risk that the Bank is unable to meet its financial obligations as they fall due</p>	<p>The Bank prepares ICAAP and ILAAP documents that are reviewed and challenged by the Board Risk Committee and ultimately approved by the Board. This requires the bank to maintain appropriate levels of capital and liquidity on an on-going basis, and also in times of stress.</p> <p>The Bank sets prudent Risk Appetite Statement which is reviewed and approved by the Board at least annually.</p> <p>The capital and liquidity positions are periodically measured against the risk appetite and reported monthly to ALCO and to the Board on a quarterly basis.</p>
<p>Compliance risk The risk of financial loss, regulatory sanctions or loss of reputation as a result of failure to comply with the applicable laws, regulations and relevant business practice</p>	<p>Adequate governance and risk management arrangements have been put in place to ensure that the Bank complies with applicable laws, regulations and industry best practices. It includes detailed policies and procedures, skilled staff, on-going and periodic training programmes, defined escalation and reporting frameworks, oversight by senior management, Compliance and Risk departments and independent risk based internal audits.</p> <p>Ongoing oversight is performed by the management and board committees including Legal & Compliance committee, Board Risk committee and Board Audit committee.</p>
<p>Emerging Risks: Economic downturn including Brexit risk</p>	<p>Until the outcome of Brexit is clearer, including the nature of the future trading relationship between the UK and the EU, uncertainty in the economic environment is expected to continue. Nevertheless, a hard Brexit outcome would impact the UK economy and mortgages market in the short and medium term, which may impact the Bank's growth plans and affect asset quality if property prices fall significantly. The Bank has therefore adopted a conservative risk appetite for BTL and commercial mortgages, to minimise such risks. Moreover, as part of the stress testing process, scenarios of falling property prices have been factored in to assess the resilience to such market movements. Further, the Bank has also identified various management actions, which would ensure that the bank has adequate capital and liquidity resources to support its operations.</p>

Scope and nature of risk reporting

The Bank has a formal structure for reporting, monitoring and managing risks. This comprises, at its highest level, the Risk Appetite, approved by the Board, which is supported by the Risk Management Framework. The Risk Management Framework has been embedded across the Bank, creating an integrated approach to managing risk. The Risk Management Framework brings together Governance, Risk Appetite, the Three Lines of Defence, the Policy Framework and risk management tools to support the business in managing risk as part of day-to-day activity.

The Bank is committed to embedding a strong risk culture throughout the business where everyone understands the risks they personally manage and is empowered and qualified to be accountable for them. This approach is strengthened by the Senior Managers and Certification Regime (SMCR), introduced by the FCA in March 2016. The aim of the SMCR is to make relevant individuals accountable for their conduct and competence. The Bank embraces a culture where each business area is encouraged to take risk-based decisions, whilst knowing when to escalate or seek advice. The Bank also promotes a culture where there is no reluctance to escalate issues or to raise emerging risks.

5. Capital Adequacy

Internal Capital Adequacy Assessment Process

This Internal Capital Adequacy Assessment Process (“ICAAP”) is prepared by State Bank of India (UK) Limited (“SBIUK” or “the Bank”), a wholly owned subsidiary of SBI, India (“SBI” or “SBI Group” or “the Parent”). There is a separate document that sets out details of the ICAAP and the outputs from this.

The ICAAP is the process through which the SBIUK’s Board with support from the senior management team of the Bank oversees and periodically assesses:

- the major sources of risk to the Bank;
- the bank’s processes, strategies and systems;
- the results of internal stress testing of these risks; and
- the amounts and types of financial and capital resources and whether these are adequate to cover the nature and level of the risks to which the Bank is exposed.

For the purpose of the ICAAP, the Bank has assessed its capital position of SBIUK on a solo basis. The Bank is 100% owned by SBI and does not have any subsidiaries, and therefore does not fall within a regulatory consolidation group.

ICAAP is prepared using existing historic data, and knowledge of assets and liabilities on the Bank’s books. Capital and financial projections contained within the forward looking Business Plan is also evaluated, both under business-as-usual and stress scenarios, to ensure that the Bank has sufficient capital at all times.

The ICAAP is formally reviewed and challenged by Board Risk Committee (“BRC”) and Board. Internal Audit played no direct role in developing the ICAAP, but have as part of its ongoing responsibilities audited the processes and controls of the systems used to produce input data to the ICAAP document.

The ICAAP document is updated at least annually, but in the event of a significant change to the circumstances of the Bank such as the development of a new business line or a significant change in business strategy, the document will be updated as soon as possible to reflect these changes.

The Board in its capacity as the ultimate decision making body formally owns the ICAAP and the outputs arising from it. The ICAAP document and completion of the process itself has been delegated to the CEO. The Board is supported in its review of the ICAAP document as periodically submitted to them for discussion and approval, the BRC provides an initial review of the materials provided to ensure that the assessment framework and its component parts as well as the capital resource estimates generated are appropriate given the size, nature and complexity of the Bank and are aligned to the Risk Appetite agreed by the Board.

While the Board has delegated responsibility for the ICAAP document to the CEO, the Risk Department is responsible for collating and drafting the document with support from Finance in particular. The Asset and Liability Committee (“ALCO”) provides initial review and guidance as the process is completed through a ‘working level’ review of initial versions of the ICAAP document.

The updated ICAAP document was broadly distributed and debated at ALCO and RMC, which ensured that all senior managers had the opportunity to contribute. This process included workshops and committee meetings in which aspects of the approaches documented in the ICAAP is

reviewed and challenged. A final draft version is submitted to the BRC for review and challenge before the final version is submitted to the Board for final review, challenge and authorisation.

Pillar 1 capital requirements

The Bank determines its Pillar 1 regulatory capital requirement based on the following approaches:

- Credit Risk: Standardized approach
- Market Risk: Standardized approach
- Operational Risk: Basic Indicator approach

Besides, capital requirement on the following is also included in Pillar 1 requirements:

- Counterparty credit risk (CCR): Mark to market method / potential future exposure
- Credit valuation adjustment (CVA) risk: Standardized method

The capital requirement for all the above risks is then aggregated to arrive at the minimum capital requirement under Pillar 1. Minimum Capital requirement under Pillar 1 under CRR as on 31 March 2019 has been assessed as under:

Particulars As at 31st March 2019	Risk weighted asset (before SME benefit)	SME benefit	Risk weighted asset (after SME benefit)	Capital requirement under Pillar 1
Credit Risk - Exposure class	£ m's	£ m's	£ m's	£ m's
Credit Risk				
On-balance sheet	1,269.4	1.3	1,268.1	101.4
Off-balance sheet	4.0	0.0	4.0	0.3
Counterparty credit risk for forex swap	3.1	0.0	3.1	0.2
Credit valuation adjustment (CVA)	1.9	0.0	1.9	0.2
Total Credit Risk	1,278.4	1.3	1,277.2	102.2
Total Market Risk	1.1	0.0	1.1	0.1
Total Operational Risk	61.0	0.0	61.0	4.9
Total Risk Weighted Assets	1,340.6	1.3	1,339.4	
Total Capital Requirement				107.2
Available Regulatory Capital				235.0
Surplus capital over Pillar 1 capital requirement				127.8

Capital Requirement under Pillar 2A

The Bank's Total Capital Requirement (formerly called Individual Capital Guidance), applicable as at March 31st 2019 was 11.7% (of which the Pillar 2A comprises of 3.7%) of total risk weighted assets.

Capital requirements under Capital Conservation Buffer:

The capital conservation buffer is a general buffer of risk-weighted assets designed to provide for losses in the event of stress. The capital conservation buffer has been phased in from 1 January 2016 to 1 January 2019, starting at 0.625% from 2016 and increasing each subsequent year by an additional 0.625%, reaching its final level of 2.5% on 1 January 2019.

Based on the above requirements, the capital conservation buffer applicable to the Bank as at 31 March 2019 is 2.5%.

Capital requirements under Countercyclical Capital Buffer:

The countercyclical capital buffer (CCyB) aims to ensure that banking sector capital requirements take account of the macro-financial environment in which banks operate. Its primary objective is to create a buffer of capital to achieve the broader macro prudential goal of protecting the banking sector from periods of excess aggregate credit growth that have often been associated with the build-up of system-wide risk. In United Kingdom, the Financial Policy Committee is responsible for the determination of CCyB rates in respect of foreign exposures.

The tables below use the standard template issued by the European Banking Authority (EBA) to show the distribution of relevant credit exposures for the calculation of the institution's specific countercyclical capital buffer (CCyB), using only the columns applicable to the Bank. The CCyB rates for only those countries that are recognized by the Financial Policy Committee (FPC) in the UK as of March 31, 2019 have been mentioned in the table:

Breakdown by country (of relevant credit exposures)	Credit Exposures Col 010	Own Funds Requirements Col 070	Own Fund Weights Col 110	Countercyclical capital buffer rate Col 120
United Kingdom	550.1	35.5	0.4	1%
All other countries	672.6	53.3	0.6	0%
Total	1,222.7	88.9	1.0	

Institution Specific Countercyclical Capital Buffer:

The table below use the standard template issued by the EBA to show the value and rate of a firm's institution-specific countercyclical capital buffer requirement and shows the Bank's value and rate as under:

As at 31 March 2019 (£ millions)

010 Total risk exposure amount	1,339.4
020 Institution specific countercyclical capital buffer rate	0.4
020 Institution specific countercyclical capital buffer requirement	5.4

The Bank is not Systemically Important Institution and hence, a separate systemic buffer is not required.

6. Capital resources

SBIUK is capitalised with £175 million of ordinary share capital provided by its Parent bank, State Bank of India. This qualifies as Common Equity Tier 1 ("CET1") for capital adequacy purposes. In addition, further capital resources of £50 million was provided in the form of subordinated debt, again injected by SBI. The terms and conditions for the subordinated debt include the following:

- The claims on the debt are subordinate to other creditors.
- The original maturity of the arrangement is 10 years (maturing on 16 Feb 2028).
- The debt is fully paid up
- There is be no incentives in relation to early repayment, and any early repayment will be at the option of SBIUK only, and in any case will not take place within 5 years of the issue of the debt. The subordinated debt qualifies as Tier 2 capital.

As at 31 March 2019, and throughout the period to 31 March 2019, the Bank maintained its capital resources at a level above the minimum capital adequacy requirements.

Key Metrics:

At 31 March 2019, the capital adequacy ratio remained strong at 17.54%, with a Tier 1 capital ratio of 13.67% which is above the regulatory requirements. The following tables summarises the capital position and leverage position of the Bank as at 31 March 2019.

Available Capital	£ m's
Common Equity Tier 1 (CET 1) (£m)	183.1
Tier I (£m)	183.1
Tier 2 cap (£m)	51.9
Total capital	235.0
Risk-weighted assets	
Total risk-weighted assets (RWA)(£m)	1,339.4
Risk based capital ratio as a percentage of RWA	
Common Equity Tier (CET) 1 ratio (%)	13.7%
Tier 1 ratio (%)	13.7%
Total capital ratio (%)	17.5%
Basel III leverage ratio	
Basel III leverage ratio (%)	11.3%

The Bank holds High Quality Liquid Assets (HQLA) to meet liquidity shortfalls arising during periods of market stress, idiosyncratic stress or a combination of the two. The Bank's Liquidity Coverage Ratio was maintained well above the regulatory requirement of 100% throughout the year.

Liquidity Coverage Ratio	
LCR ratio (%)	292.9%
Net Stable Funding Ratio	
NSFR ratio (%)	123%

Eligible Capital Resources

As this is the Bank's first year of operations, there are no trading comparatives. The following table below provides details of the capital resources of the Bank as on 31st March 2019:

Capital Reconciliation with Balance sheet		As at 31st March 2019
Particulars		£ m's
Shareholders' equity as per the balance sheet		175.0
Retained Earnings		8.1
Fair Value Reserve		0.0
Loss		-
Less: Intangible Assets		-
Less: DTA		-
Total Core Tier I Capital		183.1
Additional Tier I Capital		-
Total Tier I Capital		183.1
Eligible amount of Tier 2 instruments		50.0
General Credit Risk Adjustments (Collective Provisions)		1.9
Less Amortization of Dated Tier II capital maturing within five years		-
Total Tier II Capital		51.9
Total Regulatory Capital		235.0

Leverage Ratio Disclosures

Leverage risk is the risk that the Bank will grow its asset base at a much greater rate than it grows its capital base and will reach a stage where the capital base is insufficient to support the assets it holds. Under the Part 7 of the CRR regulations have been set with regard to the regulatory leverage ratio. This ratio is a measure of Tier 1 capital divided by asset book values (and will include off balance sheet items) which have not been adjusted in relation to risk.

The tables below summarise the leverage ratio disclosures, as required by CRD IV, as at 31 March 2019.

LRSum: Summary reconciliation of accounting assets and leverage ratio exposures

As at 31 March 2019		£m's
1	Total assets as per published financial statements	1,595.3
4	Adjustments for derivative financial instruments	13.6
6	Adjustment for off-balance sheet items (ie conversion to credit equivalent amounts of off-balance sheet exposures)	8.8
8	Total leverage ratio exposure	1,617.7

LRCom: Leverage ratio common disclosure

As at 31 March 2019		£m's
On-balance sheet exposures (excluding derivatives and SFTs)		7
1	On-balance sheet items (excluding derivatives, SFTs and fiduciary assets, but including collateral)	1,582.7
2	(Asset amounts deducted in determining Tier 1 capital)	
3	Total on-balance sheet exposures (excluding derivatives, SFTs and fiduciary assets) (sum of lines 1 and 2)	1,582.7
Derivative exposures		
4	Replacement cost associated with all derivatives transactions (ie net of eligible cash variation margin)	13.6
11	Total derivative exposures (sum of lines 4 to 10)	13.6
Other off-balance sheet exposures		
17	Off-balance sheet exposures at gross notional amount	21.2
18	(Adjustments for conversion to credit equivalent amounts)	0.0
19	Other off-balance sheet exposures (sum of lines 17 to 18)	21.2
Capital and total exposures		
20	Tier 1 capital	183.1
21	Total leverage ratio exposures (sum of lines 3, 11, 16, 19, EU-19a and EU-19b)	1,617.6
Leverage ratio		
22	Leverage ratio	11.3%

LRSpl: Split-up of on balance sheet exposures (excluding derivatives, SFTs and exempted exposures)

As at 31 March 2019		£m's
EU-1	Total on-balance sheet exposures (excluding derivatives, SFTs, and exempted exposures), of which:	1,582.7

of which: mortgage loans	407.8	-	-	-
Other assets	138.5	-	-	-
Total Assets	1,595.3	280.2	695.0	283.8

*None of them were issued by other entities of the group

7. Credit risk exposures

Credit risk management

Credit risk is the risk of loss as a result of the failure of a party with whom the Bank has contracted to meet its obligations. The main credit risk elements that the Bank faces, relate to its exposure to banks and corporates from the investment portfolio, inter-bank lending, and advances to corporate and retail borrowers.

The Board of Directors has delegated the management of credit risk to the Risk Management Committee. The committee monitors all credit related risks at the Bank. The Credit Policy Guidelines are approved by the Board of Directors Risk committee on an annual basis. The Risk management committee reviews the credit portfolio granted by the Bank and ensures the maintenance of strong internal credit controls, in order to maintain a low level of credit risk.

The Bank is committed to mitigating risk through all stages of the lending cycle. The Bank monitors customer affordability and the loan-to-value (LTV) percentages of all loans at the application stage. Additionally, the Bank employs underwriting and fraud detection policies to minimise its losses once loans have been approved as well as taking a proactive approach to the monitoring and treatment of impaired loans through the collections and recovery functions. The Bank maintains comprehensive management information on the performance and movements within the various loan portfolios in order to ensure that credit risk is adequately controlled. Any adverse trends are identified before they impact performance and such loans are monitored closely as part of the “Watch List” loan monitoring process. This management information is reported and discussed at the Risk Management Committee on monthly basis and monitored at a Board Risk Management committee level on quarterly basis.

There are no loans and advances which are non-performing on the reporting date, however, a collective provisions £1.852m has been raised. The following table shows the breakdown of the Bank's loans and advances to customers, categorised by the degree of risk of financial loss:

2019	Carrying Value £m's	Maximum Exposure £m's
Neither past due beyond 90 days nor impaired	1,044.4	1,046.3
Past due beyond 90 days, but not impaired	-	-
Impaired	-	-
Repossessions	-	-
Unutilised overdraft commitments	-	8.3
Pipeline loans	-	12.9
Total	1,044.4	1,067.5

Impaired loans

Impaired loans are loans for which the Bank determines that it is probable that it will be unable to collect all principal and interest due according to the contractual terms of the loan agreement.

Past due but not impaired

Loans where contractual interest or principal payments are past due, but the Bank believes that impairment is not appropriate on the basis of the level of security / collateral available and / or the stage of collection of amounts owed to the Bank.

Allowances of impairment

The Bank establishes an allowance for impairment losses that represents its estimate of incurred losses in its loan portfolio. The main component is a specific loss provision that relates to individually significant exposures and represents the amount remaining after deducting the expected discounted cash flows from the outstanding loan principal and accrued interest at the Balance Sheet date.

The Bank periodically assesses whether there is objective evidence that a financial asset or portfolio of financial assets is impaired. In conducting this assessment, Management takes account of any forbearance arrangements it has with its customers. The Bank considers forbearance as part of the arrears management process, the Bank will consider providing a forbearance facility to the borrower after considering each case and analysing it based on its own merits and the specific circumstances of the borrower. The primary aim of providing a forbearance facility to a borrower is to enable the complete recovery of the debt through the full repayment of any arrears. Where the circumstances of the borrower means that this primary aim is not achievable, the secondary aim is to recover the customer into a 'sustainable terms' position on their debt. In all cases the provision of forbearance aims to minimise the risk of the borrower ultimately defaulting on their debt and losing their security.

The Bank writes off a loan balance (and any related allowances for impairment losses) when it determines that the loans are uncollectible. This determination is reached after considering information such as the occurrence of significant changes in the borrower / issuer's financial position such that the borrower / issuer can no longer pay the obligation, or that proceeds from collateral will not be sufficient to pay back the entire exposure.

Loans and advances to customers

The following table provides loans and advances to customers as at 31 March 2019.

As at 31 March 2019	Notes	Non-performing loans £m's	Performing loans £m's	Total £m's
Remaining maturity				
Over 5 years		-	400.9	400.9
Between 1 year and 5 years		-	520.8	520.8
Between 3 months and 1 year		-	72.1	72.1
3 months and less		-	52.5	52.5
Past due beyond 90 days		-	-	-
Total (Gross)		-	1,046.3	1,046.3
Allowance for impairment losses		-	-	-
Collective provision		-	1.9	1.9
Total		-	1.9	1.9
Total (Net)		-	1,044.4	1,044.4

There were no loans and advances to customers in the comparative period.

Description of loans

Non-Performing loans: loans which are more than 90 days contractually past due or when there is objective evidence for impairment exists. Objective evidence for assessing for impairment may include: indications that the borrower or group of borrowers are experiencing significant financial difficulty, default or delinquency in interest or principal repayments, debt being restructured to reduce the burden on the borrower, covenant breaches, loss of significant income flows, and adverse impact of economic factors on the value of any underlying collateral.

Performing loans: loans, which are neither impaired nor past due beyond 90 days.

Allowance for impairment losses

As at 31 March 2019	Notes	Specific impairment £m's	Collective impairment £m's	2019 Total £m's
Loans and advances				
At 1 April 2018		-	-	-
Charge to profit and loss		-	1.9	1.9
Release to profit and loss		-	-	-
Amounts written off		-	-	-
At 31 March 2019		-	1.9	1.9

There were no allowance for impairment losses in the comparative period, since the Bank had not undertaken any trading activity.

Since the Bank has not identified any specific impairment, and only a collective impairment has arisen there is no geographical or industry breakdown that is relevant to the collective impairment of £1.9m.

In addition, as the Bank has not been in operation for more than 1 financial year, no movements in impairment have been recorded.

Investment securities

	Fair Value 2019 £m's	Carrying Amount 2019 £m's
Available for Sale		
Government Issued	21.9	21.9
Held to Maturity		
Government Issued	7.1	7.1
Other public sector securities & corporates	318.5	316.3
Total	347.5	345.3

There were no investment securities in the comparative period. During the year, the Bank has not made allowance for impairment losses on the investment securities.

Analysis of the credit exposures

An analysis of the Bank's total credit exposure (including Investment Securities, loans and advances to customers and balances and deposits with Banks), split by credit ratings is provided below, :-

	Investment Securities 2019 £m's	Loans to customers & deposits with banks 2019 £m's
AAA to AA-	64.4	0.0
A+ to A-	28.4	-
BBB+ to BBB-	205.3	194.9
BB and below	47.2	491.4
Unrated	-	543.3
Total	345.3	1,229.6

An analysis of the Bank's total credit exposure (including Investment Securities, loans and advances to customers and balances and deposits with Banks), split by industry sectors is provided below:

Industry Sector	2019 £m's	2019 %
Banks	339.4	22%
Real Estate	303.2	19%
Consumer Services	175.3	11%
Health Care Equipment & Services	108.0	7%
Transportation	94.8	6%
Materials	85.9	5%
Pharmaceuticals, Biotechnology & Life Sciences	84.8	5%
Automobiles & Components	61.9	4%
Sovereign	49.2	3%
Other Sectors	272.4	18%
Total	1,574.9	100%

Analysis of the Bank's credit risk exposures

The following table below summarises the regulatory credit risk exposure at 31 March 2019, (including exposures of the book subject to counterparty credit risk) with a breakdown in accordance with the risk weight is provided below, the Bank uses credit ratings from eligible External Credit Assessment Institutions (ECAIs) in order to arrive at the risk weights necessary to calculate the risk-weighted values for its exposures to rated entities: -

On- and off- balance sheet exposures (SA exposures) Risk weight breakdown	NET Exposures	RWA Exposure
Risk weight buckets	£m's	£m's
= 0%	42.6	0.0
> 0 and ≤ 12%		
> 12 and ≤ 20%	90.3	17.9
> 20 and ≤ 50%	408.1	181.6
> 50 and ≤ 75%	2.6	2.0
> 75 and ≤ 100%	1056.3	1055.1
> 100 and ≤ 425%	12.5	18.8
> 425 and ≤ 1250%		
Exposures in default		
Low risk off-balance sheet items		
Total on- and off-balance sheet exposures	1612.4	1275.2

The following tables detail the Bank's regulatory credit risk exposure at 31 March 2019:

Analysis as per Credit risk exposure class:

Particulars As at 31st March 2019	Original Gross exposure	Net exposure	Credit Mitigation	Risk weighted assets

CVA risk				1.9
Total Credit Risk Exposure	1,630.1	1,612.4	0.9	1,277.2

Analysis as per geographical distribution as 31 March 2019 is provided below:

£m's	Exposures	Net Exposures*	Risk weight of Exposures
United Kingdom	773.5	755.3	530.6
North America	482.6	482.6	465.8
European (West) Area	182.0	182.0	165.9
East Asia & Pacific	22.3	22.3	4.5
South Asia	130.0	129.6	95.1
Middle East & North Africa	10.2	10.2	5.1
Sub-Saharan Africa	29.5	29.5	8.2
Total	1,630.1	1,611.5	1,275.2

*Net exposures are provided post credit mitigation.

The Bank uses credit mitigation techniques for loans where collateral is provided in the form of cash held by the customer with the Bank (for example lending against Fixed deposits held by the customers with the Bank). Though the Bank does not apply credit risk mitigation techniques for mortgages lending, all mortgages are secured by a first charge over the property being purchased or re-mortgaged, to safeguard the Bank's assets from customer default. No second charges are permitted. Valuation of the property is conducted as part of the application process by a Royal Institute of Chartered Surveyors certified valuer from the Bank's approved panel of valuers for a new Mortgage. This is performed to mitigate the credit risks due to its exposure to potential bad debts arising from the inherent risk that customers may default on their obligations.

Analysis as per residual maturity as 31 March 2019 is provided below:

**Residual maturity
As at 31st March 2019**

Particulars	On demand	Up to 1 Year	1 Year to 5 Years	More than 5 years	Total

Counterparty credit risk

Counterparty Credit risk (CCR) is the risk that the counterparty to a transaction will default before the final settlement of the transaction's cash flows. Such transactions relate to contracts for derivative financial instruments, securities financing transactions and long-dated settlement transactions. For SBIUK, CCR arises by FX derivatives on the banking book used for hedging the FX mismatch arising from On-Balance sheet and funding.

All derivative transactions are governed by industry standard ISDA Master Agreements, supplemented by ISDA Credit Support Annexes for a number of counterparties. Policies are in place which allows the use of credit risk mitigation to reduce counterparty credit risk. As at 31 March 2019 no use has been made of collateral other than under industry standard ISDA agreements, ISDA Credit Support Annexes used in relation to derivative transactions and Global Master Repurchase Agreements used in relation to repurchase transactions.

The Bank deals in derivatives as part of its balance sheet risk management to manage foreign currency exposures. Foreign exchange forwards are used for managing this risk.

The Bank computes counterparty exposure value for derivative transactions using the mark to market method. For this exposure calculation, the current replacement cost is based on sum of market values of only those contracts where the market value is positive for the Bank. As at 31 March 2019, SBIUK does not have any Netting agreement in place with any of its counterparties and does use the netting effect to reduce its derivative exposure.

The following table provides notional amounts value of Foreign exchange swaps, along with fair value of swaps.

As at 31 March 2019			
As at £m's	Notional amounts	Fair Value Assets	Fair Value Liabilities
Exchange rate related contracts			
Currency swap agreements	699.3	7.2	(-0.9)

The following table details the counterparty credit risk exposure calculation:

As at 31 March 2019	£m's
Gross positive fair value of contracts	6.6
Potential credit exposure	7.0
Counterparty credit risk exposures	13.6

As at 31 March 2019, SBIUK does not have a credit rating and hence, is not required to post additional collateral in the event of a downgrade in credit rating. SBIUK has no exposure to credit derivative transactions.

As at 31 March 2019, SBIUK does not have any credit default swap or re-purchase agreement transaction. SBIUK has no exposure to wrong way risk.

8. Market Risk

Interest rate risk

Market risk is the risk that changes in market prices such as interest rate and foreign exchange rates will affect the Bank's income or the value of its holdings. The Bank has developed a detailed market risk management policy which is subject to review by the Risk Management Committee and approved by the Board of Directors. The Risk Management Committee sets the Market Risk tolerance levels which are approved by the Board. These are managed on a daily basis. Capital is allocated to mitigate market risk in accordance with regulatory requirements.

Interest rate risk in the Banking Book (IRRBB) arises from financial instruments where net interest income or expense and the market value of the Bank's assets or liabilities are exposed to movements in interest rates. Interest rate risk is managed by matching and monitoring the yield and duration exposure built into the Bank's portfolio. The table below summarises the re-pricing mismatches on the Bank's assets and liabilities as at 31 March 2019. Items are allocated to time bands by reference to the earlier of the next contracted interest rate re-pricing date and the maturity date.

The Bank monitors the sensitivity of the Bank's financial assets and liabilities using interest rate scenarios. Interest rate risk originating from banking activities arises partly from the employment of non-interest bearing liabilities such as Shareholders' funds and customer current accounts, but also from the gaps that arise from the normal course of business.

The management of interest rate risk against interest rate gap limits is supplemented by monitoring the sensitivity of the Bank's financial assets and liabilities to various interest rate scenarios. The table below shows the impact on net interest income over the life of the assets and liabilities of a 200 basis point rise or fall in the base rate of the main currencies traded by the Bank, and assumes a constant balance sheet position:

Interest rate sensitivity As at 31 March 2019	GBP £'000	USD £'000	EUR £'000
200 basis points increase	(1.7)	(11.6)	0.2
200 basis points decrease	1.6	13.0	(0.2)

Foreign exchange risk

Foreign exchange risk is the risk that changes in foreign currency exchange rates will affect the Bank's income or the value of assets and liabilities. The objective of foreign currency risk management is to manage and control foreign currency positions and maintain these positions within the parameters set by the Board of Directors. It is not the Bank's intention to take open positions on its own account but rather to maintain a neutral position in all currencies.

Foreign exchange exposure arises from normal banking activities, primarily from the receipt of deposits and the placement of funds. Future expected cash flows are hedged via the use of forward rate agreements in order to mitigate exposure due to movements in foreign currency rates.

The Bank has no significant structural currency exposures that are not covered by foreign exchange swap contracts

9. Remuneration

This remuneration disclosure is a requirement under Article 450 of the CRR. The disclosure below covers remuneration policies and practices for categories of staff whose professional activities have a material impact on the Bank's risk profile (Material Risk Takers ("MRTs")), and staff who hold Significant Management Functions ("SMFs"), in accordance with the requirements set out by the regulatory authorities.

SBI (UK)'s reward strategy has been developed around the key principles of the PRA's/FCA's Remuneration Code, as set out in SYSC 19A. Therefore, the Bank ensures that it:

- Maintains lists of Remuneration Code Staff;
- Promotes sound and effective risk management;
- Complies with the requirement to provide a governance mechanism, in the form of a Board Nomination and Remuneration Committee for SBIUK that will review and approve all reward policies, processes and practices at least annually;
- Includes a mechanism for the possible deferral of any variable component of the reward structure, which links to individual performance and the financial performance of SBIUK Remuneration Code Staff during the deferral period;

The Bank follows a conservative and comprehensive approach towards Remuneration Management. The remuneration policy is approved by the Board Nomination and Remuneration Committee ("BNRC"). It is responsible for the overview of the Remuneration Policy, governance of the remuneration of the SMFs and MRTs. The composition of the Committee is in line with the current regulatory recommendations such that the BNRC is chaired by a Non Executive Director and none of its members hold an executive position with the Bank.

The BNRC reviews the Bank's remuneration policy from time to time, ensuring that the same is in line with the Bank's strategy and the changing market dynamics. The BNRC further ensures that the remuneration policy of the Bank conforms to the regulatory requirements.

Link between pay and performance

The reward strategies and practices adopted by SBIUK reflect not only immediate financial results but also the employee's compliance with risk management principles measured over time. The reward structure is subject to the same rigorous practices and policies that are employed by SBIUK in its overall approach and strategy towards the management of risk. The key risks inherent in reward mechanisms have been clearly identified and measures put in place to mitigate these. The levels of reward SBIUK Ltd delivers corresponds with its overall risk appetite and environment, as well as the type of investment decisions it makes from a risk point of view.

Risk reward decisions are based on the following factors:

- Individual performance against key behavioural indicators;
- Whole team performance;
- Achievement of targets (including personal performance targets and whole firm financial targets);
- Sustainability of the on-going performance of SBIUK is factored into the delivery of reward;
- Minimum score in appraisal should not be less than 55%;
- No disciplinary records for the year; and
- Minimum absence levels.

The Bank follows the balanced scorecard principle in designing its performance management system. Every employee of the Bank adopts a goal sheet, outlining his / her responsibilities and deliverables for the year. Adequate attention is paid to the goal setting process to ensure a balance of financial goals with non-financial goals. The non-financial goals cover relevant areas of customer service, process improvement and adherence to risk and compliance norms.

Remuneration structures and their purpose

Fixed pay

In order to attract, retain and motivate employees to achieve the objectives of the Bank within its stated risk appetite and risk management framework, employees are paid fixed base salaries, and benefits such as pension scheme and staff loans. These elements are set at a level to ensure that there is not an excessive dependence on variable remuneration.

Annual bonus

The annual cash bonus is performance based and designed to drive and reward long term results. It considers financial and non-financial (such as adherence to Bank values, customer service, process improvement and adherence to regulatory norms) results and metrics at Bank, department and individual level.

Ratios between fixed and variable remuneration

The Capital Requirements Directive ("CRD") limits variable remuneration to no more than that paid as a fixed salary. The Bank currently does not exceed the limit.

Remuneration Statistics

The Bank's remuneration for the year ending March 31, 2019 is provided below:

	2019
Average number of employees*	158
	£m's
